

# NOTICE TO NEIGHBORS

## Daytime Pile Driving for New Bridge at Old Dominion Drive Planned to Start on or About June 13

### I-495 Express Lanes Northern Extension (495 NEXT) Project

#### What's Happening?

Daytime pile driving is planned to start on or about June 13 and continue for approximately three weeks in the area between the Capital Beltway and Scott's Run. The pile driving is necessary to build foundations for the new bridge at Old Dominion Drive, which crosses over I-495 (Capital Beltway). A new bridge is being built immediately north of the existing bridge as part of the 495 Express Lanes Northern Extension (495 NEXT) project.

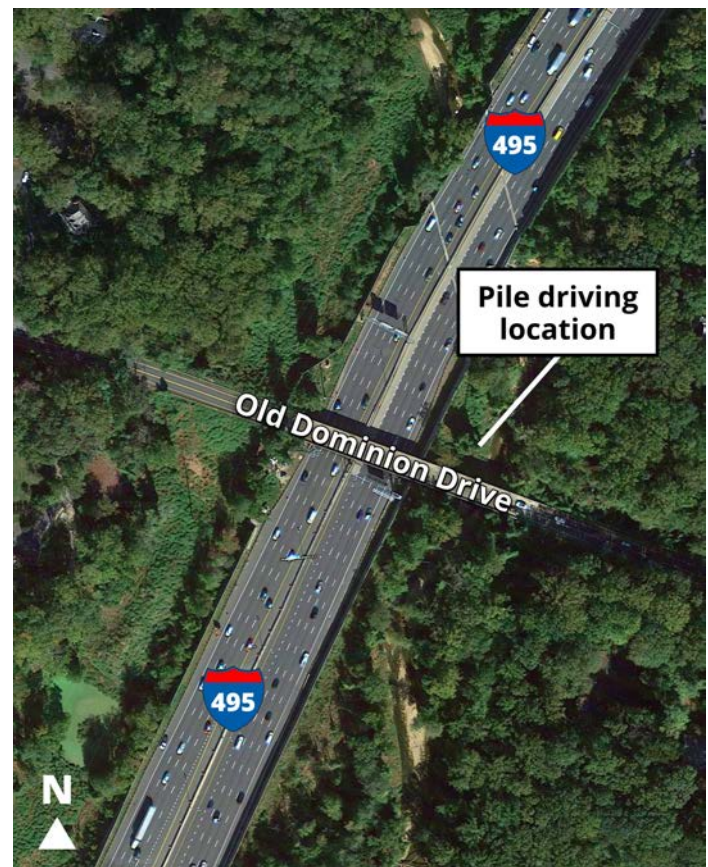

#### What Should Neighbors Expect?

The periodically noisy work will involve driving steel piles into the earth. When active, neighbors may hear hammer strikes every few seconds. This construction work is dependent on weather conditions and other scheduling factors.

#### What Happens Next?

After this round of pile driving is done, crews are planning to drive piles at the new bridge's east and west abutments later this summer. Subsequent work includes completing the abutments and relocating utility lines.

Next, bridge beams will be lifted into place over the Beltway, an activity that must be performed during nighttime hours when travel lanes below can be closed for safety reasons. The deck and remaining elements of the bridge then will be constructed.

*Looking down from the existing Old Dominion Drive Bridge, steel piles will be driven into the earth at this location between Scott's Run and the Capital Beltway for a new bridge.*
